PhD economist in data analytics and data science: marketing data analyst since June 2026 (Python, live Google Analytics 4 data); public project on Airbnb prices. SQL, Python, statistics, econometrics.

Experience

-
- Marketing Data Analyst, Boldmark** — marketing agency for local contractors Jun 2026 – Present
- Build and maintain a private analytics application in Python (Streamlit, pandas, Altair) on live Google Analytics 4 data for four websites: sessions, leads and conversion rate by channel and campaign, with monthly trends and period-over-period comparisons.
 - Added Poisson and two-proportion z-tests to period-over-period KPI comparisons; defined each website's lead metric from the lead event itself, recovering lead history that a non-retroactive analytics setting had hidden.
 - Diagnose tracking failures by reconciling metrics that should move together, e.g. lead events lost to a third-party form-embed change.
 - Built an exploratory SQL (DuckDB) workflow linking website leads to analytics events and CRM records: minute-level timestamp matching, normalized name keys, window functions.
- External Researcher**, University of Bern Jun 2024 – May 2026
- Modeled how group identity shapes selection into occupations (working paper with Marc Möller); presented at the South Carolina Game Theory Conference, 2025.
- Visiting Fellow and Lecturer**, then **Academic Visitor**, Yale University (taught Microeconomic Theory) Aug 2023 – May 2024
- Postdoctoral Researcher**, Department of Economics, University of Bern Feb 2020 – Jul 2023
- Two single-authored journal articles (below); simulation work in Python and MATLAB; taught two master's-level courses.
- Instructor and Teaching Assistant**, Pennsylvania State University Aug 2014 – Dec 2019
- Instructor for Mathematical Economics; also taught Labor Economics and Game Theory.

Project

-
- London Airbnb: How Posted Prices Behave Over the Calendar** — github.com/oleg-muratov/london-airbnb-analysis 2026
- Reproducible Python pipeline over 31 million listing-day rows (chunked CSV to Parquet, pandas, DuckDB SQL).
 - Pricing typology of 65,574 listings: a third post one price on every date; dynamic pricing is 2.4 times as common among multi-listing hosts' listings.
 - Listing fixed-effects regressions (pyfixest), SEs clustered by host and week: posted prices are 2.4% higher on Friday and Saturday nights and about 11% higher in the festive week; no detectable bank-holiday premium.

Publications and Working Papers

-
- “Entrepreneur–Investor Information Design,” *International Economic Review* 64(4), 2023.
 - “Mapping an Information Design Game into an All-Pay Auction,” *Review of Economic Design* 29(3), 2025 (online 2023).
 - “Market-Bound Research Contests” (with Igor Letina), working paper, 2026.
 - “The Effect of Occupational Choice and Stereotypes on Labor Market Sorting” (with Marc Möller), working paper, 2025.
 - “All-Pay Auctions with Reserve Price and Bid Cap,” working paper, 2021.

Skills

-
- **Data and statistics:** SQL (DuckDB; joins, CTEs, window functions), Python (pandas, NumPy, statsmodels, scikit-learn, pyfixest), Stata, MATLAB; regression, fixed-effects panel models, hypothesis testing, supervised learning.
 - **Analytics and reporting:** Google Analytics 4 (Data and Admin APIs), KPI definitions, funnel and conversion reporting, Streamlit dashboards, Altair, matplotlib.
 - **Office and tools:** Excel (including basic VBA and macros), Access, Word, PowerPoint, Teams, SharePoint; Git/GitHub, Google Cloud service accounts; AI coding assistants (Claude Code, Codex).
 - **Certification:** Associate Data Scientist, DataCamp, July 2026.

Education

-
- PhD in Economics**, Pennsylvania State University 2014 – 2019
Relevant coursework: Econometrics, Empirical Methods, Game Theory, Microeconomics, Real Analysis.
- MA in Economics**, New Economic School, Moscow (Data Analysis, Industrial Organization and Trade) 2012 – 2014
- Bachelor in Economics** (*cum laude*), Higher School of Economics, Moscow 2008 – 2012
